

THE TAAS VALUE PROPOSITION

CapEx to OpEx

CapEx → OpEx Transition

- No upfront capital requirement for municipalities
- Balance sheet de-risking via operational expenditure model
- Municipalities retain usage rights; VVU retains all hardware equity
- Service-level guarantees replace procurement risk

REVENUE ALLOCATION MODEL

SLA PERFORMANCE TARGETS

- 95%
reduction

Search uncertainty elimination across pipeline operations
- ≤500m

Leak localization radius precision bound
- ≤5%
FPR

False positive rate ceiling with ProofBridge-Liner validation
- Optimized

Information density across all HBK inference outputs

ZERO FABRICATION GOVERNANCE

Three Keys Authorization Mechanism

- VVU
- ACADEMIC
- MUNICIPAL

32 SRS parameters must be verified before any manufacturing authorization is granted. No single entity can unilaterally authorize fabrication.

- 20 bar surge pressure ceiling
- 1400 m/s celerity threshold
- 10mm corrosion limit
- FoS 1.5–3.0 safety envelope

VVU 100% EQUITY RETENTION

Hardware Sovereignty Model

- VVU owns all hardware. Municipalities hold usage rights only.
- Unilateral right to hardware retrieval and redeployment upon contract termination.
- No asset transfer, no lease-to-own, no depreciation schedule to municipalities.
