

Epistemic Runtime v0.8 Specification Alignment Report

A complete repository audit determining whether the implementation converges toward the Epistemic Runtime v0.8 specification. Covers specification mapping, drift detection, determinism audit, and execution roadmap.

Version 0.8 · January 2026

Repository: epistemic-dag-runtime

Audit Scope: 18 API routes, 37 components, EPD engine, Prisma schema

Classification: INTERNAL — BRUTALLY HONEST

CRITICAL FINDING

This project is a DASHBOARD that SIMULATES an Epistemic Runtime. It is NOT a working implementation. Spec implementation: ~8%. The .epd DSL evaluator is real and aligned. Everything else is architectural only, contradicts the spec, or does not exist.
